

Liquid Face Lift

A NON-SURGICAL APPROACH FOR RESTORING
LOST VOLUME AND RELAXING FACIAL WRINKLES

WHAT IS A LIQUID FACE LIFT?

A Liquid Face Lift is a soft tissue augmentation using dermal fillers, along with Dysport and Botox to restore a refreshed and youthful appearance.

Before Liquid Face Lift

After Liquid Face Lift

WHO IS A GOOD CANDIDATE?

Any healthy individual may be a good candidate. If you are pregnant or breast-feeding, you should not consider a Liquid Face Lift.

SKINCARE
PHYSICIANS & SURGEONS

Please see back side for additional information.

WHAT CAN A LIQUID FACE LIFT TREAT?

A Liquid Face Lift is especially effective for treating and restoring lost volume to specific areas such as cheeks, eyes and the chin. This technique is also excellent for smoothing frown lines, forehead lines, crows-feet and lifting eyebrows.

WHAT IS THE TREATMENT LIKE?

Quick and minimally invasive, Dysport and Botox are precisely injected beneath the surface of the skin into the root cause of the wrinkles. Dermal fillers such as Restylane®, Perlane®, Juvéderm®, and Sculptra® are injected into specific facial features to lift and smooth wrinkles and folds. Discomfort is minimal and there is little to no downtime.

HOW LONG WILL THE RESULTS LAST?

A Liquid Face Lift is highly customizable, making the duration of the results individual to each patient. Treatments such as Dysport and Botox typically last up to 4 months and dermal fillers can last anywhere from 6 months to 1 year.

ARE THERE ANY SIDE EFFECTS?

Soreness, swelling, mild bruising, and tenderness are the most common temporary side effects. At SkinCare Physicians & Surgeons, only highly experienced board-certified physicians and certified nurse practitioners administer aesthetic injectables.
