

Mini-Face Lift

RESTORE YOUR NATURAL,
YOUTHFUL JAWLINE AND NECK

WHAT IS A MINI-FACE LIFT?

A Mini-Face Lift is a surgical procedure which restores your natural, youthful jawline and neck. Performed under local anesthesia, a Mini-Face Lift can tighten loose, sagging skin and minimize or even eliminate wrinkling.

TREATMENTS & PROCEDURES

WHO IS A GOOD CANDIDATE?

Any healthy individual with no serious medical problems may be a good candidate.

HOW LONG IS THE RECOVERY PERIOD?

Most patients can resume light daily activities within 1-2 days. We recommend that you avoid strenuous exercise for 1-2 weeks. Slight swelling and bruising are normal and usually subside in 7-10 days.

HOW LONG DO THE RESULTS LAST?

While a Mini-Face Lift cannot stop the normal aging process, it can “turn back the clock.” Avoiding excessive sun exposure and maintaining a healthy lifestyle can help increase the longevity of your results. Results may last 5-10 years, depending on how well you take care of your skin.

WILL THERE BE VISIBLE SCARS?

All of the incisions, closed with tiny stitches, are made in the natural skin folds inside and behind the ear. Any temporary bruising may be camouflaged with makeup. With time, scars typically fade and may become almost imperceptible.

HOW IS A MINI-FACE LIFT DIFFERENT FROM A FULL FACELIFT?

Performed under local anesthesia, a Mini-Face Lift offers patients a much quicker recovery time. In addition, by tightening the superficial muscles of the face and neck, a Mini-Face Lift minimizes potential injury to critical nerves and muscles.
