

Restylane[®]

RESTORE VOLUME AND FULLNESS
TO FACIAL WRINKLES

WHAT IS RESTYLANE[®]?

Restylane is a safe, natural cosmetic filler that restores volume and fullness to facial wrinkles. Composed of hyaluronic acid, a sugar found naturally in the skin, Restylane is biodegradable and biocompatible. Allergy testing is not required.

Before Restylane

After Restylane

WHO IS A GOOD CANDIDATE?

Any healthy individual with no serious medical problems may be a good candidate. If you are pregnant or breast-feeding, you should not use Restylane.

WHAT CAN RESTYLANE TREAT?

Restylane is especially effective for treating wrinkles and folds. It is most commonly used to improve the nasolabial folds (the lines extending from the nose

to the corners of the mouth) and to add volume to lips, although other areas on the face can be treated as well.

WHAT IS THE TREATMENT LIKE?

Restylane is injected into the skin by an ultrafine needle. To optimize your comfort during the short procedure, topical or local anesthesia may be used. Results are virtually instantaneous.

HOW LONG WILL THE RESULTS LAST?

Restylane typically lasts 6 to 12 months. Many patients find that having an additional treatment before the product has fully dissipated prolongs the results.

ARE THERE ANY SIDE EFFECTS?

Swelling and bruising may occur, although this usually subsides within several days. Avoiding aspirin, Vitamin E, St. John's Wort, and non-steroidal anti-inflammatory medications such as Advil, Motrin, and Aleve will minimize the possibility of bruising.

HOW IS RESTYLANE DIFFERENT FROM BOTOX?

Restylane is a cosmetic filler that fills lines and grooves. Botox is a purified protein that relaxes the muscle. Restylane is often combined with Botox for the most optimal result. Botox eliminates the underlying root cause of the wrinkle while Restylane fills in the wrinkle.
