

## *Scar Removal*

MINIMIZE THE APPEARANCE OF ACNE SCARS, KELOIDS, HYPERTROPHIC SCARS, AND SURGICAL SCARS

WHAT TYPES OF SCARS CAN BE REMOVED?

The appearance of acne scars, keloids, hypertrophic scars, and surgical scars can be minimized using the latest technology. Lasers such as the Vbeam® Perfecta, the Sciton Profile™ Erbium laser, and the Fraxel® laser can be used either alone or in combination.

## WHAT TYPES OF TREATMENTS ARE AVAILABLE?

With over 10 different lasers, the healthcare providers at SkinCare Physicians & Surgeons can choose the appropriate technology for the best results. Lasers such as the Vbeam Perfecta, the Sciton Erbium laser, and the Fraxel laser can be used either alone or in combination to improve the appearance of a scar. Therapeutic injections and surgical punch excisions may also be performed in conjunction with laser therapy for optimal results.

## WHAT TYPES OF RESULTS CAN I EXPECT?

Although complete eradication of a scar may not be possible, minimizing the appearance of a scar so that it blends in with the surrounding skin may be attained.

## HOW MANY TREATMENTS ARE NEEDED?

Multiple treatments are typically recommended, depending on the size and location of the scar.

## IS THERE ANY DOWNTIME?

Depending upon the type of treatment that is performed, your skin may appear slightly red or pink temporarily. If ablative resurfacing is necessary, using the Sciton Erbium laser, healing may occur over 7-10 days.
